Latest Edition: International Economics: Global Markets and Competition (4th Edition) This book integrates the microeconomics of trade with international finance and open economy macroeconomics. The emphasis throughout is on international competition and the limits of trade policy. Economics began with a debate over tariffs. Domestic industries lobby for protection against foreign competitors or export subsidies. Government policy makers dole favors in return for cash and votes. Governments negotiate free trade agreements but disregard them when possible with tariffs, export subsidies, and other policies to influence foreign trade and investment. The forces of international competition, however, eventually overwhelm government policy. This text presents the critical issues of international trade and finance. Trade theory includes partial equilibrium market analysis, neoclassical trade models, constant cost production, factor proportions production, and models of industrial organization. The text integrates concepts from international finance and the basic models of open economy macroeconomics. The presentation uses graphs with numerical examples making the theory easier for students, especially when combined with more general classroom presentation. The text does not assume previous courses in intermediate economics or calculus but develops the theory with simple tools. Numerous questions give students confidence to use the theoretical models and concepts. Over 250 boxed examples illustrate the theory, many with visually descriptive charts and plots. The text is concise in its presentation style. Students enjoy its clear straightforward style and instructors notice the difference on exams.

Introduce the most important theories and views in strategic management today with this concise, yet fully complete, text. Many books and articles have been written about how firms can achieve and sustain high performance. They typically focus on a particular aspect of the firm such as its culture, resources, leadership, ability to learn, or management practices. However, often the very firms that are used as examples are no longer high performing even a few years later. In contrast, this book asserts that it is the efficiency and effectiveness of a firm ' s entire value creating system that determines its performance over the long term. Systems theory is used as an integrative mechanism to combine the best ideas from economics, the resource-based perspective, and stakeholder theory. Based on this theoretical foundation, tools are provided for conducting in-depth, detailed analyses of each part of a firm ' s value creation system and its contribution to the total stakeholder value created by the firm. This information leads to the development of strategies, including specific initiatives for overcoming weaknesses in

the system and for creating new value for stakeholders, based on the reasoning that firms exist to create value for their stakeholders – customers, employees, shareholders, suppliers, and the communities in which they operate.

Few industries are buffeted from as many strong forces as healthcare. The industry is highly regulated, thus dramatically increasing costs and sometimes even interfering with the ability to deliver healthcare. New drugs, treatments, and medical technologies are so common that keeping track of them can be overwhelming, and incorporating them into patient care or administration can be costly and complicated. This book lays a stakeholder foundation for managing a healthcare organization strategically. It contains step-by-step tactics as well as examples of HCOs that are having success with various aspects of the stakeholder approach in their organizations. As any experienced healthcare executive knows, making changes to a healthcare delivery system is like trying to modify an aircraft while it is in flight. The process is complicated and the consequences of mistakes can quickly lead to disaster. With this book, you ' ll get a new approach to managing healthcare within your organization, an approach that will unlock innovation and create more value for a broad group of industry participants.
