The most practical, real-world presentation of cost accounting on the market, this book blends a traditional and proven method of teaching cost accounting with the integration of innovative topics. Cost topics are covered in the context of organizational strategy and operational tactics, as cost management decisions are sensitive to strategies driven by quality, cost, and innovation. Kinney, Prather-Kinsey, and Raiborn reinforce the material with real-world examples and visual illustrations that bring cost management techniques into the student's sphere of understanding. A flexible organization appropriate for either a one- or two- semester course--coupled with clear and abundant visual presentations--allows students to clearly understand difficult topics. The text's revised organizational structure streamlines chapter materials as well as reduces redundancy between cost accounting and other business courses.

? Service firms have high overhead costs which are difficult to assign to individual services. To bring transparency to their value chain, they need costing approaches that help them find their own improvements. Markus B. Baum explores current theory and practice of value chain approaches and cost accounting to develop a costing approach with a suitable instrument for the allocation of fixed and overhead costs for a service firm. He describes the service business costing (SBC) approach. This hybrid-costing model has a hierarchical structure in terms of consolidation and allocates cost and revenues on the lowest hierarchical level possible to ensure that all costs and income are assigned to activities from which they originated.

University of Sunderland, course: Management Accounting and Control, language: English, abstract: This report is divided into two parts. The first part will explain how a standard costing system works and how a variance analysis is used properly. Furthermore, the statement "Standard Costing and Variance Analysis are appropriate to any type and size of organisation" will be critically evaluated. The second part determines factors, which must be considered in the decision-making process. In addition, four scenarios of decisions will be provided and analysed. One of the main objectives of an organisation is to minimise the cost of production and to control the costs as they are limited resources within a business (Gupta, 2010). Management accounting literature provides several tools in order to achieve these objectives. In this context, the system for collecting and reporting revenue and cost information by areas of responsibility is called responsibility accounting (Siegel & Shim, 2006). It is based on the assumption that managers should be held responsible for their performance. A well-designed responsibility accounting system integrates responsibility centers within the organisation. In addition, responsibility centers are units within the organization, which have control over costs and revenues (Siegel & Shim, 2006). There are different types of responsibility centers such as profit centers, investment centers, revenue centers and cost centers. In the following report, the focus is on cost centers. Here, a variance analysis based on standard costing is a performance measure of a cost center (Siegel & Shim, 2006). In addition, a standard costing system is a useful tool facilitating decision-making.

Features articles on: information overload and multiple constituency values related to environmental and social disclosures; the extent to which product life cycle cost analysis, customer involvement and cost management contribute to the competitive advantage of firms; and, more.

attributes, the areas engineering managers are expected to add value, the web-based tools which can be aggressively applied to develop and sustain competitive advantages, the opportunities offered by market expansion into global regions, and the preparations required for engineering managers to become global leaders. The book is organized into three major sections: functions of engineering management, business fundamentals for engineering managers, and engineering management in the new millennium. This second edition refocuses on the new strategy for science, technology, engineering, and math (STEM) professionals and managers to meet the global challenges through the creation of strategic differentiation and operational excellence. Major revisions include a new chapter on creativity and innovation, a new chapter on operational excellence, and combination of the chapters on financial accounting and financial management. The design strategy for this second edition strives for achieving the T-shaped competencies, with both broad-based perspectives and in-depth analytical skills. Such a background is viewed as essential for STEM professionals and managers to exert a strong leadership role in the dynamic and challenging marketplace. The material in this book will surely help engineering managers play key leadership roles in their organizations by optimally applying their combined strengths in engineering and management.
