Geopolitics: The Geography of International Relations

Geopolitics is the study of the influences of geographical factors in politics and the relationships between different political actors, particularly sovereign states, as well as de-facto states and subnational geopolitical entities. Within the context of international relations, geopolitics provides a framework for studying foreign policy, as well as for explaining and predicting the behaviors of international political actors based on geographical variables.

We are talking therefore not only about the influence of natural givens on balances of power (what Anglo-American experts on international relations sometimes call "[geopolitics]") but also about the territorial aspects of rivalries and the localization of forces present in a broad international context. Geographers (teachers of geography, at least) have very different ideas about their discipline and its raison d'être.

Geopolitics is the study of the effects of Earth's geography on politics and international relations. While geopolitics usually refers to countries and relations between them, it may also focus on two other kinds of states: de facto independent states with limited international recognition and relations between sub-national geopolitical entities, such as the federated states that make up a federation, confederation or a quasi-federal system. At the level of international relations, geopolitics i

This volume examines geopolitics by looking at the interaction between geography, strategy and history. This book addresses three interrelated questions: why does the geographical scope of political objectives and subsequent strategy of states change? How do these changes occur? Over what period of time do these changes occur?

Written by one of the world's leading political geographers, this fully revised and updated textbook examines the dramatic changes wrought by ideological and economic forces unleashed by the end of the Cold War. Saul Bernard Cohen considers these forces in the context of their human and physical settings and explores their geographical influence on foreign policy and international relations.

On Geopolitics shows how the 'new geopolitics' combines the fields of geography and international relations to create a comprehensive overview of current political developments. Using recent developments in geographical technology as well as traditional theories and methods, Harvey Starr explores themes of spatiality and territoriality as they connect to international affairs. He also examines geopolitical dynamics beyond borders in a world now buffeted by non state actors and subject to intergovernmental institutions and norms. On Geopolitics is a brilliant synthesis of Starr's ongoing work on conflict and co-operation, alliances, opportunity, and willingness, within a geographic framework. At the same time, Starr points the way toward new tools and techniques for the study of globalisation and world politics.

This book, originally published in 1986, shows the importance of geography in international power politics and shows how geopolitical thought influences policy-making and action. It considers the various elements within international power politics such as ideologies, territorial competition and spheres of influences, and shows how geographical considerations are crucial to each element. It considers the effects of distance on global power politics and explores how the geography of international communication and contact and the geography of economic and social patterns change over time and affect international power balances.

This volume examines geopolitics by looking at the interaction between geography, strategy and history. This book addresses three interrelated questions: why does the geographical scope of political objectives and subsequent strategy of states change? How do these changes occur? Over what period of time do these changes occur? The theories of Sir Halford Mackinder and Nicholas Spykman are examined in order to provide an analytical narrative for five case studies, four historical and one contemporary. Taken together they offer the prospect of converting descriptions of historical change into analytic explanations, thereby highlighting the importance of a number of commonly overlooked variables. In addition, the case studies will illuminate the challenges that states face when attempting to change the scope of their foreign policy and geo-strategy in response to shifts in the geopolitical reality. This book breaks new ground in seeking to provide a way to understand why and how the geographical scope of political objectives and subsequent strategy both expands and contracts. This book will be of much interest to students of geopolitics, strategic studies, military history, and international relations.

Cohen argues that the emergence of the United States as the world's sole superpower and the process of globalization have failed to remove the importance of geography as a political and strategic factor of great import. After laying out the structural basis for his theory of geopolitical theory, he launches into an examination of how geopolitical realities have developed since World War II, a period that witnessed greater change than the preceding two and a half centuries. He then turns his attention to the meat of the book, separate examinations of the each of the major world regions, including examinations of the important countries and their individual geopolitical realities.

This proceedings book addresses the main issues of contemporary political geography and international relations, providing a platform for discussion and collaboration of experts in the fields of Political Geography, Geopolitics, International Relations, etc. Participants from all over the world consider the controversies and challenges posed by globalization, focusing, in particular, on the ideologies of globalization and regionalism, migration crises, prevention of ethnic conflicts, and measures to promote sustainable development. The content of the book may be interesting to expert community, academics and popular audience.

Geopolitical conditions influence all strategic behaviour - even when cooperation among different kinds of military power is expected as the norm, action has to be planned and executed in specific physical environments. The geographical world cannot be avoided, and it happens to be 'organized' into land, sea, air and space - and possibly the electromagnetic spectrum including 'cyberspace'. Although the meaning of geography for strategy is a perpetual historical theme, explicit theory on the subject is only one hundred years old. Ideas about the implication of geographical, especially spatial, relationships for political power - which is to say 'geopolitics'- flourished early in the twentieth century. Divided into theory and practice sections, this volume covers the big names such as Mackinder, Mahan and Haushofer, as well as looking back at the vital influence of weather and geography on naval power in the long age of sail (sixteenth to nineteenth centuries). It also looks forward to the consequences of the revival of geopolitics in post-Soviet Russia and the new space-based field of "astropolitics".

In the last two decades, various states from the Global South have emerged as important players in international relations. Most popular among them is China. Brazil, India and South Africa have also taken essential roles in global and regional politics. Compared to traditional great powers, they can be labelled "[regional great powers]" or "[regional powers]" because their influence is - with the exception of China - concentrated on their neighbourhood. The impact of regions, meaning the impact of geography, on the economics and politics of regional powers is surprisingly understudied. This book analyses how geographical conditions influence the regional economics and politics of South Africa, allowing the author to delineate its region of influence.
