that stays in focus when the magnification is changed

Microscope Lab Questions Flashcards / Quizlet

The total magnification of the microscope is equal to the magnification of the ocular multiplied by the magnification of the objective. If you are using the 4x objective and the 10x ocular the total magnification would be $4 \times 10 = 40x$. A specimen which is actually 1mm in size would appear to be 40mm in size when viewed through the microscope.
