Steven Mithen's The Prehistory of the Mind is an ambitious attempt to build a model of the evolutionary history of the mind from archaeological evidence. Whilst the book has much to commend it as an accessible and comprehensive introduction, both to the relevant palaeoanthropological models and to contemporary theories of the mind derived by psychologists and cognitive scientists, its claims to have sought and found 'the cognitive foundations of art, religion and science' are exaggerated.

To suggest, as Howard Gardner does in his review of my book The Prehistory of the Mind (Thames and Hudson, 1996), coincidentally in the same issue as the Pinker-Gould exchange, that discussions of prehistoric behavior cannot go beyond speculation appears to be a further reflection of this academic arrogance that pervades the cognitive sciences. Archaeology can go just as far beyond speculation about past behavior as can, say, a cognitive-development-psychologist when speculating about what ...

The "mind has a long evolutionary history and can be explained without recourse to supernatural powers." When Mithen talks about cognitive architecture, the architect implied is natural selection. The time-scales are impressive: 65 million years of primate evolution, 6 million years since the common ancestor we share with our primate cousins, 4.5 million years since the oldest known human ancestor.
